

Table of Contents

Chapter 1: What is Perl 6?	7
Origins of Perl 6	7
Differences from Perl 5	8
Sigils	8
Signatures	9
Classes	11
Compatibility with Perl 5	13
Perl 6 resources	14
Documentation	14
Test Suite	15
STD.pm	15
Community	15
Compilers	16
Parrot	17
Pugs	17
Perlito	17
Rakudo	18
Working with Rakudo Star	18
Downloading and installing Rakudo Star	18
Command-line options	19
The -c command	19
The --doc command	20
The -e command	20
The -h and --help commands	21
The -n command	21
The -p command	21
The -l and -M commands	21
The -v and --version command	22
The --stagestats command	22
Writing our Hello World program	23
Summary	24
Chapter 2: Writing Code	25
Using Unicode	25
Whitespaces and unspaces	29
Comments	31
One-line comments	31

Multiline comments	33
Embedded comments	35
Creating Pod documentation	35
The =begin / =end Pod block	36
Phasers	39
Simple input and output	40
Summary	42
Chapter 3: Working with Variables and Built-in Data Types	43
<hr/>	
Using variables	43
Declaring variables	44
Variable containers in Perl 6	44
Scalars	45
Arrays	45
Methods of the Array type	46
Hashes	48
Methods of the Hash class	49
Naming conventions	50
Typed variables	51
Using simple built-in data types	52
Integer data type	54
Methods of the Int type	56
Converting to a character using the chr method	56
Checking whether the number is prime	56
Generating a random number	57
Getting the sign of the value	57
Calculating the square root of the value	57
Getting the next and previous values	58
Getting the absolute value	58
Rational data type	58
Methods of the Rat type	59
Getting the Perl representation of the value	60
Converting to an Int value	60
Getting the numerator and denominator	60
Methods for rounding the value	61
Methods pred and succ	61
Numeric data type	62
Num versus Numeric versus Real	62
Enumerations	63
Boolean data type	63
Methods of the Bool type	64
Using pred and succ	64
Methods to generate random Boolean values	64
String data type	65

Methods of the Str class	65
Converting register	65
Methods to cut strings	66
Methods to check the content of a string	67
Length of the string	67
Reversing a string	67
Complex numbers	68
Methods of the Complex data type	68
Getting real and imaginary parts	68
Data types to manipulate date and time	69
Using the Date class	69
Using the DateTime data type	71
Summary	72
Chapter 4: Working with Operators	73
<hr/>	
Operator classification	74
Categories of operators	74
Operators as functions	76
Operators in Perl 6	77
Infix operators	77
Assignment operators	77
Operators for multiplication and division	78
Operators for addition and subtraction	79
Modulo operator	80
Divisibility operator	81
Integer division and modulo operators	81
Bitwise operators	82
Integer shift operators	83
String logical operators	83
Boolean logical operators	83
Great common divisor and least common multiple operators	84
String repetition operator	85
List repetition operator	86
String concatenation operator	86
Junction operators	86
The does operator	87
The but operator	88
Universal comparison operator	88
String comparison operator leg	89
Comparison operator for Real numbers	90
Range creating operator	90
Equality and non-equality operators	90
Numerical comparison operators	91
String comparison operators eq and ne	91
Other string comparison operators	92
The before and after operators	92

Equivalency test operator	92
Value identity operator	93
Bound check operator	94
Smartmatch operator	94
Approximate-equality operator	95
Boolean logical operators	95
Defined-or operator	97
Operators for minimum and maximum	97
Pair creation operator	98
Comma operator	98
Invocant separator	99
Zip operator	99
Cross operator	100
Sequence operator	100
Binding operators	101
Logical operator with lower precedence	102
Data pipe operators	102
Ternary operator ?? !!	103
Prefix operators	103
Increment and decrement operators ++ and --	103
Boolean coercion operator	104
Boolean negation operator	104
Numeric coercion operator	105
Numeric negation operator	105
String coercion operator	105
Two-complement binary negation operator	106
Boolean coercion and negation operator	106
The upto operator	106
The temp operator	107
The let operator	108
The not operator	109
The so operator	109
Postfix operators	109
Object-oriented postfix operators	110
Increment and decrement operators	110
Circumfix operators	110
Quote-word operator	110
Group operator	111
Hash or block creation operator	111
Postcircumfix operators	112
Positional access operator	113
Element access operators	113
Invoke operator	114
Meta-operators in Perl 6	114
Assignment meta-operator	114
Negation meta-operator	115

Reverse meta-operator	115
Reduction meta-operator	116
Cross meta-operator	116
Zip meta-operator	117
Hyper-operators	117
User-defined operators	119
Summary	121
Chapter 5: Control Flow	122
<hr/>	
Understanding code blocks and variable scoping	123
The do keyword	124
Conditional checks	125
Using loops	128
The loop cycle	128
The for loop	129
Using while, until, and repeat	131
Breaking the loop	133
Using labels	135
Executing code once	136
Collecting data with gather and take	137
Setting the topic with given	138
Summary	141
Chapter 6: Subroutines	142
<hr/>	
Creating and calling subroutines	143
Default values	145
Optional parameters	145
Named parameters	146
Parameter traits	147
Slurpy parameters	150
Parameter placeholders	151
Type constraints	152
Typed parameters	152
Return type	153
Multi subs	155
An example	157
Nested subroutines	158
Creating operators	159
Passing functions as arguments	161
Anonymous subs	162

Summary	164
Chapter 7: Modules	165
<hr/>	
Creating a module	165
Using modules	168
The need keyword	169
The import keyword	170
The use keyword	170
The require keyword	171
Scoping	172
More on is export	173
Exporting variables	173
Selective import	174
Introspection	175
Using zef	176
Installing a module	177
Searching for a module	179
Uninstalling modules	179
zef command summary	180
How Rakudo stores modules	180
Summary	183
Chapter 8: Object-Oriented Programming	184
<hr/>	
Creating a class	184
Working with attributes	186
Read-and-write attributes	188
Typed attributes	189
Using other classes as data types	191
Working with methods	192
Private methods	196
More about attributes	196
Public and private attributes	197
Automatic getters and setters	198
Class attributes	201
Class methods	202
Inheritance	204
Inheriting from a class	204
Using child class instances as objects of a base class	205
Overriding methods	207
Submethods	209
Multiple inheritance	210

Appending objects and classes using roles	212
Using introspection to learn more	215
Method postfix operators	216
Summary	218
Chapter 9: Input and Output	219
<hr/>	
Standard input and output	219
Working with files and directories	221
Opening a file	221
Closing a file	222
Testing file and directory properties	222
Manipulating files	224
Working with directories	225
Reading from a stream	226
Reading a single line	226
Reading characters	227
Lazy readers	229
The eof method	231
Writing to a stream	231
The print function	231
The say method	233
Example of using the gist method	233
The printf method	235
Characters and strings	235
Integers	235
Floating-point numbers	236
Summary	237
Chapter 10: Working with Exceptions	238
<hr/>	
The try block	239
The \$! variable	241
Soft failures	242
The CATCH phaser	243
The Exception object	244
Throwing exceptions	247
Resuming from exceptions	248
Typed exceptions	249
Rethrowing exceptions	250
The Failure object	251
Creating custom exceptions	252
Summary	253

Chapter 11: Regexes	254
Matching against regexes	255
Literals	256
Character classes	257
The . (dot) character	258
Backslashed character classes	258
\s and \S characters	259
\t and \T characters	259
\h and \H characters	260
\w and \W characters	261
\n and \N characters	261
\d and \D characters	262
\w and \W characters	263
Character classes	263
Predefined subrules	264
Using Unicode properties	265
Character class arithmetics	267
Creating repeated patterns with quantifiers	268
Greediness	269
Extracting substrings with capturing	270
Capturing groups	271
The Match object	271
Named captures	272
Using alternations in regexes	274
Positioning regexes with anchors	275
Matching at the start and at the end of lines or strings	276
Matching word boundaries	277
Looking forward and backward with assertions	277
Modifying regexes with adverbs	278
:i (:ignorecase)	279
:s (:sigspace)	280
:p (:pos)	280
:g (:global)	281
:c (:continue)	282
:r (:ratchet)	282
:ov (:overlap)	283
:ex (:exhaustive)	284
Substitution and altering strings with regexes	285
Summary	286
Chapter 12: Grammars	287

Creating a grammar	288
Matching a grammar	289
Using rules and tokens	292
Using actions	296
Using abstract syntax tree attributes	300
Handling expressions	302
Using the actions class	305
The whole program	308
Summary	311
Chapter 13: Concurrent Programming	312
<hr/>	
Junctions	312
Autothreading	313
Threads	313
Starting a thread	314
Creating and running a new thread	317
The id and name methods	318
Printing thread objects as a string	319
Lifetime threads	319
Using locks in Perl 6	320
Promises	320
Creating a promise	321
Statuses of a promise	321
Factory methods	322
The result of a promise	323
Combining promises	324
Executing code after the promise is kept or broken	325
The anyof and allof methods	325
Channels	326
Basic use cases	326
To wait or not to wait?	327
Closing channels	328
Channels as queues	329
Summary	330
Chapter 14: Functional Programming	331
<hr/>	
What is functional programming?	331
Using recursion	334
Using reduction	336
Higher-order functions and lambdas	337

The WhateverCode blocks	339
Piping data and feed operators	340
Manipulating the scope	343
Closures	343
Currying	346
Dynamic scope	348
Creating and using iterators	349
Lazy and infinite lists	350
Summary	352
Chapter 15: Reactive Programming	353
<hr/>	
What is reactive programming?	353
On-demand supplies	354
Generating data with supplies	356
The react and whenever keywords	359
Using lists as the source of the supply data	359
Live supplies	360
Filtering and transforming data streams	363
Summary	365
Index	366
<hr/>
